

MARK ANTHONY RESOSO

Full-Stack Software Engineer

Tacurong, SK, Philippines • +63 976 466 5670 • resoso.mark.anthony27@gmail.com • antoniyorss.me • github.com/Antonyo27 • linkedin.com/in/mark-anthony-resoso-b58b10407

SUMMARY

Full-Stack Software Engineer with production experience building scalable web apps, cross-platform mobile apps, and AI automation workflows using Laravel, React, Express.js, PostgreSQL, and React Native. Proven track record shipping multi-tenant enterprise inventory systems, government REST APIs, and automated business pipelines with n8n and MCP.

WORK EXPERIENCE

Software Engineering Intern

Sep 2025 – Jan 2026

Infosoft Studio (Mini Clean Business Solutions)

- Engineered and deployed **15+ Laravel REST API endpoints** for regional government workflows in BARMM, optimizing Eloquent relationships and SQL queries to improve response times and record accuracy.
- Automated extraction and migration of **4,500+ government resolutions** and **2,000+ PDF documents** from legacy systems using a custom Python script → achieving **99%+ record integrity** via automated validation.
- Implemented granular **RBAC security** for multi-office hierarchies with bulk permission management; built Express.js backend modules for the Case Records Management System (CRMS).
- Standardized Docker-based Laravel development environments (**Laradock/Ubuntu**), eliminating environment drift and friction across the developer onboarding pipeline.
- Selected by Chief Software Architect to mentor **5 incoming interns** on Laravel MVC patterns, API design, and database conventions; presented technical proposals in BARMM stakeholder meetings.

Software Engineer | AI Automation Specialist

May 2024 – Present

Syndrix (Project-Based)

- Designed and deployed a full-stack inventory and delivery tracking system for a corporate egg-production client across **3 farm sites** and **2 warehouses**, serving **9–17 daily active users** with role-separated verification dashboards.
- Engineered a multi-branch retail POS and inventory platform (**React, Express.js, PostgreSQL, Prisma**); streamlined sales, stock transfers, repairs, and purchasing workflows across **3 retail branches**.
- Integrated AI agent workflows (**n8n, Zapier, Model Context Protocol / MCP**) to sync sales data, Tally.so webhooks, and customer records seamlessly across HubSpot, Slack, and PostgreSQL databases.
- Leveraged **Claude Code** and **Cursor** daily within engineering workflows to accelerate feature delivery, bug remediation, and automated test suite generation.

SELECTED PROJECTS

ScanServe — Real-Time Multi-Tenant Queue Management System (Laravel, Livewire, MySQL, Docker)

- Architected a multi-tenant queue platform with hierarchical RBAC across organizations and service windows meeting Philippine ARTA standards; selected for presentation at regional PSITS & Expo events.
- Implemented QR-code registration with live status notifications and WebSocket-powered display boards updating instantly on call, serve, or no-show events.

EggFlow — Poultry Farm & Egg Production Management System (Laravel, PostgreSQL, Redis, Docker)

- Built end-to-end lifecycle tracking from collection to sale; engineered shift management modules with automated discrepancy calculations to enforce cash and inventory accountability.
- Delivered executive dashboards with interactive charts surfacing production comparisons, sales trends, and real-time inventory valuations.

AI Recruiting Pipeline — Automated Candidate Screening System (n8n, Gemini API, HubSpot)

- Built an automated candidate evaluation pipeline processing PDF applications via Gemini API, featuring prompt-injection defense mechanisms and deterministic JavaScript scoring logic.
- Integrated human-in-the-loop recruiter queues with Slack digests and stage-triggered transactional HTML email dispatches via Resend API.

Offline-First Mobile Song Catalog App (React Native, Expo, SQLite, Firestore)

- Engineered a cross-platform mobile app featuring an offline-first synchronization engine transferring catalog packs from Cloud Firestore into a local SQLite database with atomic transactions.

TECHNICAL SKILLS

Languages: PHP, JavaScript, TypeScript, Python, SQL

Backend: Laravel, Node.js, Express.js, REST APIs, Prisma, Sanctum

Frontend: React, Vue.js, Inertia.js, Next.js, React Native, Expo, Livewire, Alpine.js, Tailwind CSS

Databases: PostgreSQL, MySQL, SQLite, Firebase Firestore, Redis

DevOps & Infrastructure: Docker, GitHub Actions, GitLab CI/CD, Nginx, Ubuntu, DigitalOcean, Cloudflare

Architecture & Security: RBAC, Multi-Tenant Systems, WebSockets, Offline-First Sync

AI & Automation: Claude Code (Daily), Cursor, Model Context Protocol (MCP), Zapier, n8n, Webhooks, LLM APIs

EDUCATION

Sultan Kudarat State University — College of Computer Studies, Isulan, Philippines

May 2026

Bachelor of Science in Information Technology

- Academic Distinction: President's Lister; consistent Dean's Lister.
- Relevant Coursework: Software Engineering, Database Systems, Web Development, Data Structures & Algorithms, Operating Systems.
